

Geometric and Arithmetic means

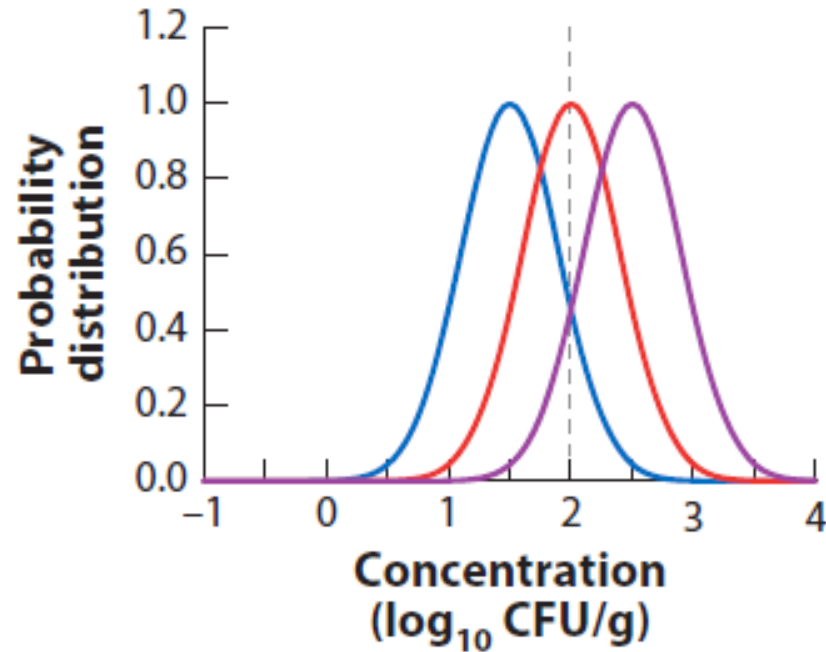

Marcel Zwietering

Wageningen University

ICMSF Member since 2005

Contamination often log-normally distributed

Define the mean on log-scale or on arithmetic scale ?

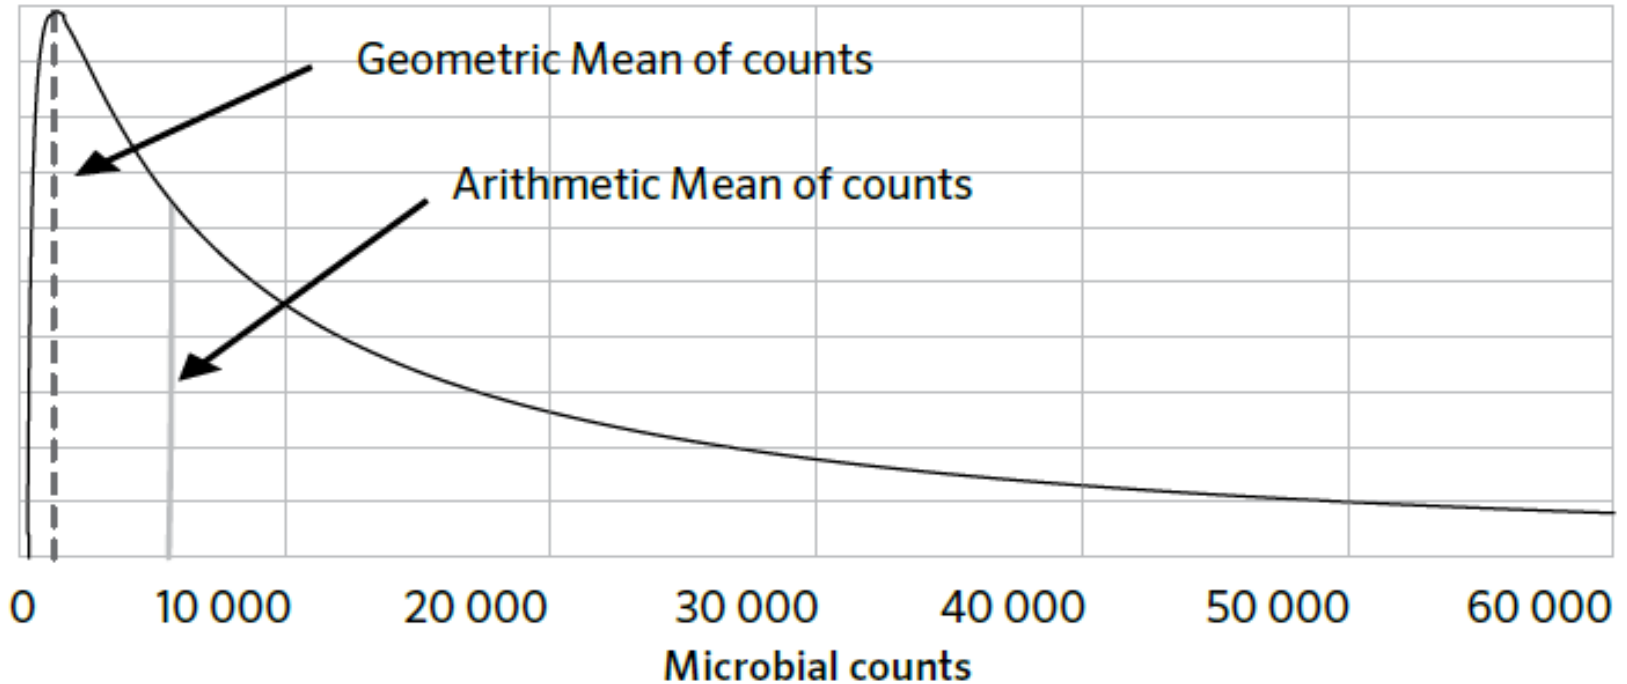

Contamination often log-normally distributed

Geometric mean: Concentration at the peak of the distribution

Arithmetic mean: Average on the linear scale

(a) Log_{10} -normal distribution)

Geometric mean: Concentration at the peak of the distribution

Arithmetic mean: real average on the linear scale (more influenced by the right hand tail with big numbers)

Which one to chose ?

For microbial analysis for data representation: log scale

For impact analysis: linear scale

You have to eat 3 products that contain *B. cereus*

Your choices:

1: 100 cfu

100 cfu

100 cfu

2: 10 cfu

100 cfu

1000 cfu

3: 1 cfu

100 cfu

10000 cfu

Which row would you chose ?

You have to eat 3 products that contain *B. cereus*

Your choices:

1: 100 cfu	100 cfu	100 cfu
2: 10 cfu	100 cfu	1000 cfu
3: 1 cfu	100 cfu	10000 cfu

Log of the concentration

1: 2	2	2: mean is 2
2: 1	2	3: mean is 2
3: 0	2	4: mean is 2

You have to eat 3 products that contain *B. cereus*

Your choices:

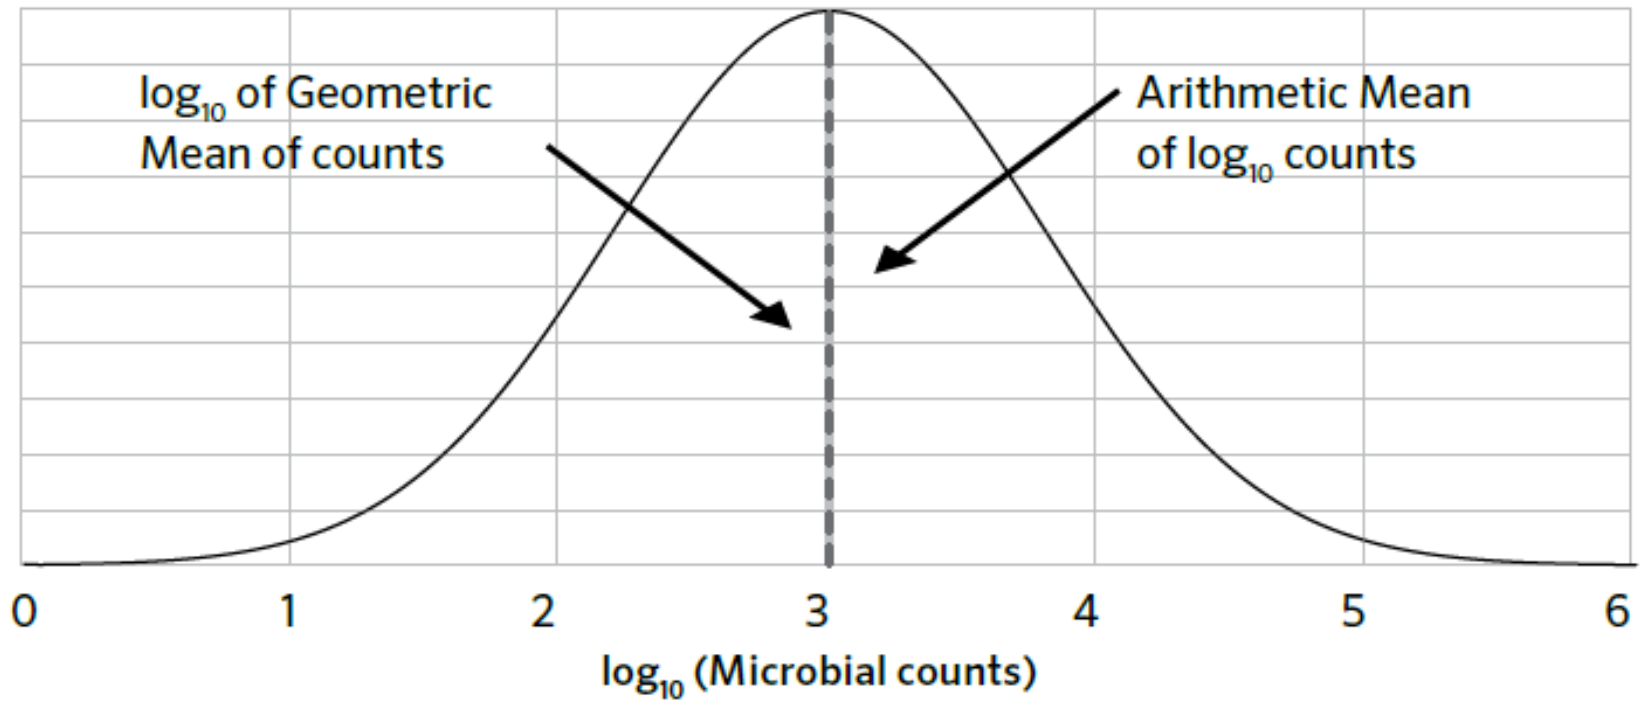

1: 100 cfu	100 cfu	100 cfu
2: 10 cfu	100 cfu	1000 cfu
3: 1 cfu	100 cfu	10000 cfu

arithmetic mean

log(arithmetic mean)

1:	100 cfu/g	2.0
2:	370 cfu/g	2.6
3:	3367 cfu/g	3.5

(b) Normal distribution

(a) Log_{10} -normal distribution

For a lognormal distribution

$$\log_{10}(\bar{C}) = \overline{\log_{10}(C)} + 0.5 \cdot \sigma_{\log_{10}(C)}^2$$

m 2

Lot acceptance for Pd			
			P(accept)
Pd	10 %		59.0 %
actualPd	45.1 %		5.00 %

INPUTS		P(accept)	
mean	1.90	Computed	5.00 %
sigma	0.80	Desired	5 %
m	2	Find mean that gives desired P(accept)	
n	5	Find n that gives desired P(accept) or better (less)	
c	0	P(reject) 95.00 %	

ALTERNATIVE n AND c		P(accept)	
mean	1.90	Computed	5.00 %
sigma	0.80	Target, left	5.00 %
m	2	For any value of n and c imputed find the m that gives the same P(accept) as the model on the	
n	5		
c	0		

Sandbox: for your own calculations			
FSO	3		
compliant	0.91526	not comply	0.08474
%	91.52604 %		8.473957
	1.339231		
	1.984384		

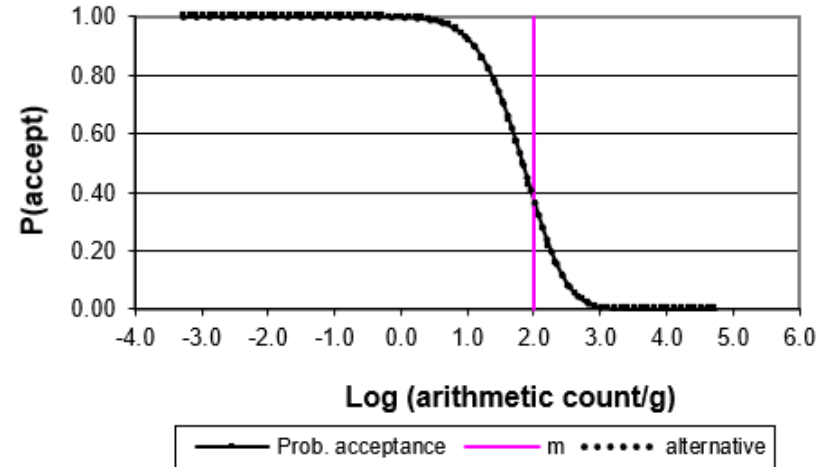

Means			
Arithmetic (=Average)		Geometric (=Median)	
434.2	cfu/g	79.6	cfu/g
2.64	log cfu/g	1.90	log cfu/g

Implied Acceptance level			
Percentile	z-score	Concentration at this percentile	
99.9	3.10	4.38	
FSO	P(exceedance)	target level	
4.38	0.000973	1.900897	

Probability density function (PDF) for log counts.
Distribution mean = 1.90 and sigma = 0.80

Operating characteristic curve scaled to relate log arithmetic mean count to m

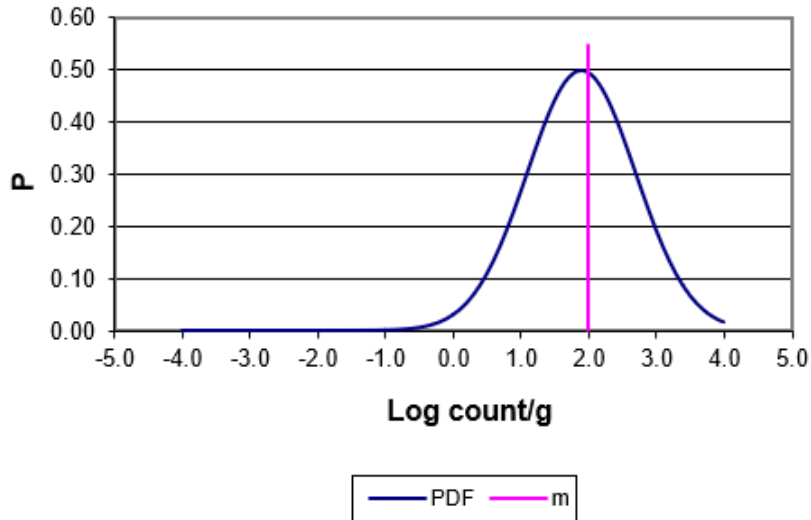

INPUTS		P(accept)	
mean	1.90	Computed	5.00 %
sigma	0.80	Desired	5 %
m	2	Find mean that gives desired P(accept)	
n	5	Find n that gives desired P(accept) or better (less)	
c	0	P(reject)	95.00 %

ALTERNATIVE n AND c		P(accept)	
mean	1.90	Computed	5.00 %

Conclusions

- Distributions relevant for performance of sampling plans
- Arithmetic mean is most relevant for risk management
- Tools exist !

Microbiological sampling plans is a tool to explore ICMSF recommendations.

Standard Program

This spreadsheet calculates probabilities of acceptance for materials with different microbial loads and population standard deviations. The microbes are assumed to be lognormally distributed. This is new version 8 (November 2016) including additionally a tab with the effect of specificity and sensitivity.
